

More Details....

How responsive is the NitroPro? Extensive testing proves that NitroPro's 35 lbs/inch spring rate can absorb more vibration and impact than the leading pivot seatpost! We are not talking about a little better but a very noticeable plusher ride!

How can NitroPro Surpass pivot seatposts? Pivot seatposts (four-bars) must use stiff springs or elastomers to suspend the rider. Only NitroPro's highly responsive gas/coil spring absorbs 100% of the impact up to 2.3" and significantly dampens larger bumps up to 4"*

Essentially Stictionless Movement is another huge benefit of the gas spring. Here's why, most of what has been considered stiction in telescopic posts has actually been stiff springs. This has not been discovered until now because no one has used a gas spring. The small amounts of stiction that are present are drastically reduced by use of Teflon bearings and the 'Zero Stiction Area' created by the slotted stanchion. So smooth is the movement that it beats the leading brand of pivot seatposts in absorption tests.

***Large Impacts** Over travel limit more pre-load is added to give significant shock absorption for up to 4 inch high obstacles. NitroPro has been tested to 4 inches. Over that amount and you should stand on the pedals.

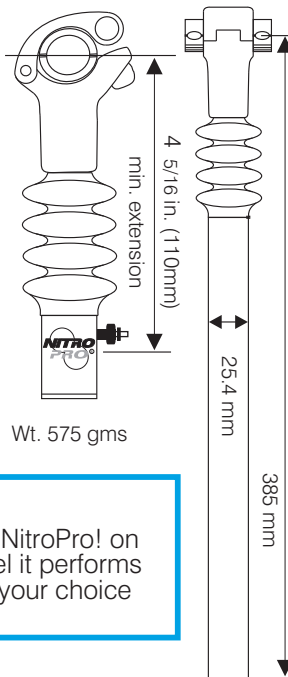

Personalize with 8 Combinations of Gas and Coil Springs!

Nitrogen Gas springs are interchangeable for a softer or firmer ride. Triple sealed and maintenance free. Don't be fooled by nitrogen charged elastomers. Available in 40 lb, 60 lb, 80 lb and 100 lb gas pressures.

Computer Machined Barrel Shims

are made from 7000 series aluminum alloy. Extra long 'deep reach' design ensures a perfect no slip fit to your bike frame. (one shim is included with post)

Available in 24 sizes: 26.0 26.2 26.4 26.6
 26.8 27.0 27.2 28.0 28.2 28.6 29.2 29.4
 29.6 29.8 30.0 30.2 30.4 30.6 30.8 30.9
 31.0 31.2 31.4 31.6 31.8
 (custom sizes available at additional cost)

NITROGEN GAS

SUSPENSION

NitroPro[®] Gas suspension seatposts can change your mind about what you call a rough road.™

"The NitroPro moves into action and smoothly (ever so smoothly) compresses and rebounds back to its fully extended position. We wish more forks had action as smooth as the NitroPro. This is a big step forward in suspension seatpost performance. ...NitroPro would be a serious upgrade. You won't believe the adjustability, amount of travel and quality of travel."

"NitroPro is definitely plush and takes big hits with ease. Compared to other suspension posts I've ridden, the NitroPro feels the most full-suspension-like."
Bike Mag

Oil dampening lets you remain seated after large impacts.

NitroPro is the Most Comfortable Suspension Seatpost Made!

- No stiff elastomers
- No residual bounce
- No stiction
- No rebuilding post.
- No backwards movement
- No difficulty changing springs

Plush Gas/Coil Spring Design

Pressurized nitrogen gas, in the gas spring, supports you while a highly responsive coil spring provides smooth progressive compression. This gas/coil spring design exclusive to NitroPro absorbs 100% of the impact and vibration. No partial absorption like suspension seatposts that use elastomers, coil or air springs. Gas suspension is even better than pivot seatposts! Subdues the most abusive trails yet still remains sensitive to small cracks in sidewalks and uneven pavement. You'll have reduced fatigue, increased traction and more energy.

Oil Dampening

Gas springs have an internal reservoir of specially formulated hydraulic fluid. The fluid lubricates, provides end-of-travel dampening, and adjusts gas volume to fine tune spring pressure. This is not a separate oil dampener that will need to be serviced and will not be prone to leak over time.

No Rebuilding Post Ever ①

No keyways in aluminum tube or moving plastic keys to wear and replace and no costly rebuild kits. All play is removed by Expanding Key which is stationary but grows in width inside the steel stanchion as an adjustment nut is turned. NitroPro will give you many years of service.

Simple One Bolt Clamp is forged for maximum durability and strength. Forward hinge design is lightweight, easy to install and reliable. Satin finish will look great after years of use. Fast and Precise Adjustment to 2.5° deg.

Smooth Slotted Ground Stanchion creates a Zero Stiction Area that cancels out any stiction. (see back)

Stainless Steel adjustment removes play in stanchion will never rust or need lubrication. Conveniently located outside post just below boot. A fraction of a turn dials out any play in stanchion!

NitroPro[®]
2.3" TRAVEL
\$149

One Year Warranty limited

Easy to adjust preload allows different compression rates to accommodate all comfort levels. Use a flat blade screw driver no hex wrench needed. Coarse threads will not seize up.
